<b>Venue</b>		<b>E-202</b>	
<b>Resource Person/s Details</b> (Affiliation and Designation)		<b>M.SUBHASHREE</b> Assistant Professor Department of Mathematics Hindusthan College of Arts and Science.	
<b>Scope of the Event</b>		Operational Research can be simply formulated as the science of rational decision-making along with the study of the synthesis of intricate problematic situations. Thus, the nature of operations research is purely scientific as it aims at determining the systematic behaviour and hence optimizing the results.	
<b>Deliberations/ Discussions</b>		<ol style="list-style-type: none"><li>1. Identifying a problem that needs to be solved.</li><li>2. Constructing a model around the problem that resembles the real world and variables.</li><li>3. Using the model to derive solutions to the problem.</li><li>4. Testing each solution on the model and analyzing its success.</li><li>5. Implementing the solution to the actual problem.</li></ol>	

<p><b>Outcomes of the Event</b></p>	<p>The field of operations research provides a more powerful approach to decision making than ordinary software and data analytics tools. Employing operations research professionals can help companies achieve more complete datasets, consider all available options, predict all possible outcomes and estimate risk.</p>

<b>Scope of the Event</b>	The Scope of the Event is Students should gain knowledge in application of Analytic geometry is used in physics and engineering, and also in aviation, rocketry, space science, and spaceflight. It is the foundation of most modern fields of geometry, including algebraic, differential, discrete and computational geometry..		
<b>Deliberations/ Discussions</b>	In this Session deliberate about 1. The importance of analytic geometry is that it establishes a correspondence between geometric curves and algebraic equations. 2. The study of analytic geometry is important as it gives the knowledge for the next level of mathematics. It is the traditional way of learning the logical thinking and the problem solving skills.		

<p><b>Outcomes of the Event</b></p>	<p>The program objective is student should realize Analytic geometry is used in physics and engineering, and also in aviation, rocketry, space science, and spaceflight. <b>Resource Person/s /Faculty Incharge Details</b> (Affiliation and Designation)		Ms. M. MUTHUSELVI, Assistant Professor, Department of Mathematics, Hindusthan College of Arts & Science, Coimbatore	
<b>Scope of the Event</b>		The Scope of the Event is Many areas of computer science require the ability to work with concepts from discrete mathematics, specifically material from such areas as set theory, logic, graph theory, combinatorics.	
<b>Deliberations/ Discussions</b>		1. Discrete Mathematics is fundamental to computer science which is the science behind software engineering. 2. Application of Discrete Mathematics in Algorithms, Computer Architecture, Computer Systems, Databases, Distributed Systems, Functional Programing, Machine Learning, Networks, Computer Security, and Operating Systems. are discussed in this session.	

<p><b>Outcomes of the Event</b></p>	<p>The program objective is student should realize Discrete Mathematics is the backbone of Computer Science and Concepts &amp; notations from discrete mathematics are useful in studying and describing objects and problems in all branches of computer science, such as computer algorithms, programming languages, cryptography, automated theorem proving, and software development.</p>

<b>Venue</b>		<b>C 407</b>	
<b>Resource Person/s Details</b> (Affiliation and Designation)		<b>Mrs. VYSHNA UNNI</b> Assistant Professor Department of Mathematics Hindusthan College of Arts and Science.	
<b>Scope of the Event</b>		TORA package is a computer application software package used for statistical computation and analysis. It is basically applied for operations research analysis. TORA optimization window is a graphical user interface. This is what makes it unique from statistical packages that have spreadsheet windows.	
<b>Deliberations/ Discussions</b>		We discussed the solution of some linear programming problems with TORA	
<b>Outcomes of the Event</b>		TORA can be used to solve problems in tutorial mode and automated mode. The tutorial mode is particularly useful because it allows concentration on the main concepts of the algorithms while relieving the user of the burden of the tedious computations that generally characterize OR.	
<b>Remarks and Feedback on the Event</b>		The students are attracted into TORA and encouraged to learn about that more.

<b>Resource Person/s/ Faculty Incharge Details</b> (Affiliation and Designation)		Mrs. J.RADHALAKSHMI, Assistant Professor, Department of Mathematics, Hindusthan College of Arts & Science, Coimbatore	
<b>Scope of the Event</b>		Students were able to know the Applications of Statistics in Daily life.	
<b>Deliberations/Discussions</b>		Students learned how to calculate F-ratio and use simple strategies to analyze the variance.	

<b>Outcomes of the Event</b>	The purpose of the programme was to make the students know about the concept of Analysis of Variance (ANOVA). The one-way analysis of variance is used to determine whether there are any statistically significant differences between the means of three or more independent unrelated groups.
<b>Remarks and Feedback on the Event</b>	The Programme was interactive and the discussion revealed the applications of Statistics in real life.

<p>Deliberations/Discussions</p>	<p>Students learned how to calculate mean, median and mode for ungrouped and grouped data.  The mean, median and mode are widely used by insurance analysts and actuaries in the healthcare industry.  For example:</p> <ul style="list-style-type: none"> <li>● Mean: Insurance analysts often calculate the mean age of the individuals they provide insurance for so they can know the average age of their customers.</li> <li>● Median: Actuaries often calculate the median amount spent on healthcare each year by individuals so they can know how much insurance they need to be able to provide to individuals.</li> <li>● Mode: Actuaries also calculate the mode of their customers (the most commonly occurring age) so they can know which age group uses their insurance the most.</li> </ul>
